

# Equipment Management Solution Highlights

The Equipment Management module from Grand Avenue Software helps manage the calibration, maintenance, and qualification activities for your equipment.

- Manage a wide range of equipment across an organization
- Track equipment status using customer-configurable values
- Define standard calibration, maintenance and qualification activities for each type of equipment
- Capture and trend ad hoc activities like repairs to equipment
- View activity and status history for each piece of equipment
- Set up automated schedules for groups of equipment to ensure that activities are performed
- Receive automated warnings from the system when scheduled activities need to be completed
- Easily assign equipment activity tasks to users
- Submit CAPAs related to calibration or maintenance activities

## Manage Incomplete Activities [Help](#)

Assign users to perform the following activities.
